8 yrs of experience in product management, stakeholder management, offshore client engagement, cross functional team managements in finance, ecommerce, manufacturing and others

Education: Bachelor of Technology in Electrical Engineering, Indian Institute of Technology Madras (2011)

Experience:

AI/ML Engineer , KOGO.ai		Jan'25-Jul'25
- Built AI agent with LLM for OCR, RAG, MCP, web search, and workflows to process sales leads, map parent company hierarchy, and integrate with manufacturing client's CRM - Developed AI powered data science platform Asimov that streamlines analytics via NL2SQL, featuring modular agents for data cleaning, statistical analysis, machine learning, visualization and flexible LLM and data source integration - Built AI solutions to identify call center logs to identify key issues and suggest curated knowledge base and other process improvements using LLM - Developed AI sale pipeline monitoring and auto generating sale improvement plan for automotive sector using LLM - Build AI agentic solution to propose health insurance plans for employees that minimizes employer's cost and maximizes employees' satisfaction for USA using workflows and dynamic input of various parameters		
Co-Founder , RichFeyn.com		Aug'21-Jul'24
AI	Launched an AI product that transforms phone camera images into professional catalogue images helping SMEs in jewellery, clothing, and cosmetics create high-quality visuals at a lower cost. NLP pipeline involved Semantic analysis, Image Captioning, Transformers	
IoT	- Developed an IoT-based smart jar with auto-reordering functionality for household kitchen, making it easier for busy households to automate ordering and save time. It involved AI powered cart generator based on text prompt using LLM - Built iOS and Android apps for the smart jar to track item quantities and automate orders, improving user experience and enabling retailers to track inventory and ensure timely delivery.	
Senior Manager – Data Science for wholesale banking , Axis Bank		Apr'17-Dec'20
Sector	- Identified sector of each current account using web scraping, N-gram NLP methods - Increased new customer acquisition by 25% through sector wise campaigns	
Attrition	- Predicted which high value customers who are about to leave, using NLP text mining on transaction narration and customer interaction logs - Increased the customer retention rate by 18% which lead to 10% increase in balance	
Network effect	- Identified the users of competitor bank transacting with axis bank accounts and converted them which led to increase in balance by 17% using the named entity recognition to identify supply chain position - Reduced high outflow of money from Axis to competitor bank by selectively upselling products which increased product per customer from 2.3 to 3.1	
Senior Business Analyst , Tata Consulting Services		Jul'15-Mar'17
Digital marketing	Built auto-web crawler, web scraper and data science product to identify leads and relevant information about different geographical areas and clients which decreases lead activation time by 50% using POS tagging, topic mining NLP techniques	
Pre-sales	- Built solution to optimizing the order of the hotel search result for US Airline firm based on NER methods - Built predictive model for early identification of issue for maintenance service for US medical equipment manufacturing company using LDA and topic identification NLP techniques - Prepared near-miss management solution to improve safety for specialty chemicals firm using service record text mining NLP methods - Built battery degradation model to formulate better warranty service for Japanese EV firm	
White paper: Transforming social media marketing by analyzing weather patterns and twitter activity using sentiment analysis		
Associate - Fashion Business Analytics , Snapdeal		Oct'14-Feb'15
Developed promo code and cashback rule engine for all categories of Fashion vertical which led to 50% of the categories reaching \$6M revenue per month		
Algorithm Engineer - Semiconductor Wafer Inspection, KLA Corporation		Mar'11-Mar'13
Built image processing products to improve detection of defects. This helped application engineers adjust the configuration in order to catch the defects of customer interest, increasing capture rate for rare defects from 80 to 90% eliminating manual inspection in semiconductor fabrication plants in Korea, Taiwan, USA		

Interests: Running, Yoga, Meditation, Trekking
